

Hi, my name is **Jon Hughes**.

I'm a **front-end** developer.

I craft semantically meaningful, accessible markup and produce code that is readable, functional and optimized for performance. I have **over 7 years** of experience working in both start-up environments and large companies.

I stay current with modern development best practices and am passionate about the ever-evolving web.

WORK EXPERIENCE

Streamified, LLC., Senior Front-End Web Developer

Jan 2012-August 2012

Hand-coded and maintained web presence including a responsive HTML5 web application to facilitate all smartphone users to replace native application.

Created full-featured browser extension for both Firefox and Chrome.

iWin, Inc., Front-End Web Developer

July 2008-August 2012

Worked directly with designers to create beautiful and usable designs which I sliced into validating XHTML/CSS through XSLT and created custom JavaScript and jQuery code for user interaction and communicating with the back-end via Ajax using JSON.

Authored and maintained CSS and HTML best practices documentation and spearheaded the peer-review process to ensure maximal outgoing code quality.

Fire Mountain Gems and Beads, Web Designer

July 2006-July 2008

Personally analyzed all outgoing code to ensure it was up to the internal style guides and led training presentations for modern development practices to development team.

Applied separation of content and presentation philosophies to previously table-based pages, resulting in an 86% decrease in rendered markup and a 55% speed increase.
